

Frontend Testing

The frontend testing is done manually. We perform the process of login, upload recording and listen to recording by hand. And also producing errors in code manually to see if a pop up is shown correctly telling the user that there is an error and optional suggested way to deal with it.

- Home (Not need to testing)

- Login

Correct signal (Login success)

✓ Login success - Redirecting to Home Page ✕

Error signal including username not correct, password not correct

! Login Failed - AxiosError: Request failed with status code 401 ✕
